Test 2 [Topic - conditions & loop]

x = 20

if x > 21:

print()

Name :- Trupti Vasant Gaikwad

17
20

1) Print table of 5 using for loop.

→ num = 5
for i in range(1, 11):
 print(num, "X", i, "=", num*i)
 print()

2) Print table of 10 using while table.

num = 10
start = 1
end = 11
while start < end:
 print(num, "X", start, "=", num*start)
 start = start + 1
 print()

3) Print Count down from 10 to 1 using while loop.

→ i = 10
→ while i >= 10:
 print(i, end = " ")
 i -= 1

7) Count the number of vowels & Consonant in a given string like: "Python is a programming language".

s = "Python is a programming language"
v = 0
c = 0
for ch in s:
 if ch in "aeiou":
 v += 1
 else:
 c += 1
print("vowels =", v)
print("consonants =", c)

11) ~~what is the syntax of if-Elif-else Statement~~

→ ~~if condition :
 statement.
else condition :
 statement
if condition :
 statement
else condition :
 statement ;~~

~~if condition :
 statement .
if condition :
 statement
else condition :
 statement .
else condition :
 Statement .~~

12) Can an if statement exists without an else statement ?

→ Yes. if statement exists without an else statement. (1)

13) can there be multiple elif statement in one block ? (1)

→ Yes. multiple elif statement in one block.

14) can there be multiple if statement in one block ?

→ Yes. multiple if statement in one block. X

15) Is the else statement compulsory ?

→ No. else statement compulsory. (1)

16) what is the difference if & elif ?

→ (1) if → checks conditions once
else → checks conditions repeatedly. (1)

17) why is indentation important in python's if statements?

→ Yes. indentation is important in if statement. Indentation defines blocks of code (true)

18) what are the types of loops in Python.

→ 1) for loop ✓
2) while loop ✓ (1)

19) what is while loop in Python.

→ while loop is repeatedly execute block of code that given condition is true. (1)

20) what are the argument of range() function

→ start, end, skip (step). (1)

11) what is the syntax of if-Elif-else statement.

if condition1:
statement

elif condition2:
statement (1)

else:
statement

4) find the sum of digits of no from 1-10

→ sum = 0
for i in range(1,11):

sum += i

Print (sum) (1)

5) Find the sum of digits in even no of 1 to 10.

→ sum = 0
 for i in range(1, 11):
 if i % 2 == 0:
 sum += i
 Print(sum)

0, 2, 4, 6, 8

①

6) Find the maximum of list like [78, -5, 10, -20, 99] using while

→ list = [78, -5, 10, -20, 99].
 i = 0
 max = list[0]
 while i < len(list):
 if i < max[i]:
 Print(i)
 i += 1
 Print(max)

①

7) remove duplicates elements [display unique] from list using for loop.

a = [10, 20, 20, 30, 40]
 b = [10, 20, 20, 50, 80, 90]
 for i in a:
 if i not in b:
 b.append(i)
 Print(b)

①

8) Display common elements from two list using while loop.

→ a = [10, 20, 20, 30, 40]
 b = [10, 20, 20, 50, 80, 90]
 i = 0
 while i < len(a):
 if a[i] in b:
 Print(a[i])
 i += 1

①
