Test 2 [Topic - Conditions & loop]

PAGE No.	
DATE	/ /

Name :- Tripti Vasant Gaikwad

1) Print table of 5 using for loop.

```
→ num = 5
for i in range (1,11):
    print (num, "X", i, "=", num*i)
    print()
```

2) Print table of 10 using while table.

```
num = 10
start = 1
end = 11
while start < end:
    print (num, "X", start, "=", num*start)
    start = start + 1
    print()
```

3) Print Count down from 10 to 1 using while loop.

```
i = 10
while i >= 10:
    print (i, end = " ")
    i -= 1
```

7) Count the number of vowels & Consonant in a given string like : " Python is a programming language".

```
S = " Python is a programming language .
V = 0
C = 0
for ch in S:
    if ch in "aeiou":
        V += 1
    else:
        C += 1
print ("Vowels =", V)
print ("Consonants =", C)
```

11) ~~what is the syntax of if-elif-else statement~~

→ ~~if condition: .
 statement.
else condition: .
 statement.
if condition: .
 statement.
else condition: .
 statement;~~

~~if condition: .
 statement.
if condition: .
 statement.
else condition: .
 statement.
else condition: .
 statement.~~

12) Can an if statement exists without an else statement?

→ Yes. if statement exists without an else statement.

13) can there be multiple elif statement in one block?

→ Yes. multiple elif statement in one block.

14) can there be multiple if statement in one block?

→ Yes. multiple if statement in one block.

15) Is the else statement compulsory?

→ No. else statement compulsory.

16) what is the difference if & elif?

→ ① if → checks conditions once.

else → checks conditions repeatedly.

ment? 17) why is indentation important in python's if statements?

→ Yes. indentation is important in if statement.

18) what are the types of loops in Python.

→ 1) for loop
2) while loop.

19) what is while loop in Python.

→ while loop is repeatedly execute block of code that given condition is true.

20) what are the argument of range() function.

→ start, end, skip (step).

11) 10) what is the syntax of if-Elif-else statement
if condition1:
statement.

elif condition2:
statement

else:
statement.

4) find the sum of digits of no from 1-10

→ sum = 0.
for i in range (1,11):
sum += i.
Print (sum).

5). find the sum of digits in even no of 1 to 10.

```
→ sum = 0
for i in range(2, 11, 2):
    sum += i
Print (sum).
```

6). Find the maximum of list like [78, -5, 10, -20, 99] using while

```
→ list = [78, -5, 10, -20, 99].
i = 0.
max = [0].
while i < (list):
    if i < max[0]:
        Print(i)
    i += 1.
Print (max).
```

7). remove duplicates elements [display unique] from list using for loop.

```
a = [10, 20, 20, 30, 40]
b = [10, 20, 20, 50, 80, 90].
for i in a:
    if i not in b:
        b.append(a).
Print (b).
```

8). Display common elements from two list using while loop.

```
→ a = [10, 20, 20, 30, 40]
b = [10, 20, 20, 50, 80, 90].
i = 0.
while i < len(a):
    if a[i] in b:
        Print (a[i]).
    i += 1
```
