

Q1.) Reverse a String Without Slicing:

>>"Hello World"

Ans1- str1="Hello World"

print(str1[::-1])

Q2.) Count words in a sentence:

>>"A quick brown fox jumped over the lazy brown dog"

Ans2- str1="A quick brown fox jumped over the lazy brown dog"

l1=list(str1)

print(l1.count(' '))

Q3.) Remove Duplicate characters:

>>"Carrot"

Ans3- s={C,a,r,r,o,t}

print("".join(s))

Q4.) What is the difference between list and sets?

Ans4- Set:- A set is an unordered, collection of objects with no index assigned

It does not allow a duplicate value in it

It is represented by {}

List:-A list is a ordered, indexed collection of objects

It allows duplicates of other values in it

It is represented by []

Q5.) Can sets contain lists? If yes How if no why?

Ans5- Sets cannot contain lists because they are not an allowed data type in a set.

Q6.) Why are sets Faster?

Ans6- Sets are faster as they take up lesser space in RAM.

Q7.) Difference Between remove() and discard()

Ans7- remove() returns the value that was removed from the collection of data whereas discard() does not return the data that was removed from the collection of data.

Q8.) How many methods to insert elements inside a list? Total method?

Ans8- There are a total of 3 methods to add a element in a list-

.append()

.insert()

By concatenation.

extend()

✓ (1)

Q9.) How many methods to delete elements in the list? Total method?

Ans9- There are a total of 4 methods to remove a element from a list-

.pop()

.remove()

.discard()

.clear()

✓ (1)

Q10.) How many operators in Python Write their name in explain?

Ans10- There are 3 types of operators in Python-

Arithmetic operators(+,-,*,/,//)

Logical operators (>,<,&,,|,!) ✓

Operational operators(AND,OR,NOT) ✓

*Ass
gnment
()*

Q11.) Write the precedence rule of arithmetic in python?

Ans11- The precedence rule is the order of importance like the following:-

1. ()

2. //,/,*

3. +,-

4. >,<,&,|,!

5. AND,OR,NOT

6. :=

(1)

Highest 1,,/*

Lowest - , , ,

Q12.) How to sort the elements in list using slicing method?

>>[5,11,14,7,8,3,2,5,9]

sort

Ans12-

Q13.) What is Dictionary?

Ans13- Dictionary is an ordered collection of keys and values and is represented by {}

(1)

Q14.) How many methods to create Dictionary?

Ans14- There are 3 methods to create Dictionary-

D={"name":"Arnav"} ✓

D=dict([name=="Arnav"]) ✓

D={} ✓

(1)

Q15.) How many methods to access value in dictionary?

Ans15- There is only one method to access value in dictionary and that is by taking the key of that value.

key

.get()

Q16.) How many methods to delete element in a dictionary?

Ans16- There are 2 methods to delete elements in a dictionary-

.del() ✓

.clear() ✓

remove()

(1)

Q17.) How to perform mathematical operations in sets write method name?

Ans17-

Q18.) What is packing variable in tuple? Explain using example?

Ans18-

ans = x ← unpack

Q19.) What is unpacking variables in tuple? Explain using example?

Ans19-

Q20.) Difference between Sets and Dictionary?

Ans20- Set:- A set is an unordered, collection of objects with no index assigned

It does not allow a duplicate value in it

Dictionary:- It is an ordered collection of keys and its values

It does not allow a duplicate key but allows a duplicate value

(1)
